

Glare Screen, Glare Screen+

Reduce glare by over 99%.

FEATURES

- Reduces ELF/VLF E-field radiation by 99.9%.
- Made from high-quality optical glass.
- Increases display contrast by up to 3 times.
- Accepted by the American Optometric Association.

OVERVIEW

The Glare Screen is made of optical-quality float glass. The HighContrast™ feature provides maximum contrast enhancement for brighter colors and images when used with color monitors.

The glass is cut to size, then edge-glare coating is vacuum deposited; this virtually eliminates glare from the front surface! The anti-glare coating is also a conductive coating to provide ELF/VLF E-field shielding.

The Glare Screen is easy to attach to your monitor with universal clips. Connection to ground is provided by a wire with a specially designed three-prong plug that fits all standard U.S. and Canadian electrical outlets.

The Glare Screen+ has a wraparound design for curved monitors.

TECH SPECS

Power — 110-V plug for antistatic cord for ground only, hot and neutral are not wired

Size — 14- or 15-inch monitors

Item	Code
Glare Screen for Flat Monitors	AC127A
Glare Screen+ for Curved Monitors	AC128A
