

Addendum

Title: CMS 400 Addendum
Part/Document Number: 13D26A-35/A
Date: October, 1998

Supplement to: CMS 400 User's Guide
Part/Document Number: 13D26A-7/E
Date: June, 1998

Attention McAfee VirusScan® Users

If you install CMS 400 version 5.1 on a computer that has McAfee VirusScan installed, the VirusScan application may detect a virus called SMEG.GUEENS.A in the Hub400_1.exe or penpal.com files. **This is a false virus detection.** It occurs only with earlier versions of McAfee VirusScan.

If you encounter a false virus detection, do not have VirusScan fix the virus. Instead, download the latest VirusScan version from www.mcafee.com. The following versions or later of VirusScan do not detect the false virus:

Version 3.19 for Windows 95

Version 3.15 for DOS v3.3 or later
