

SwitchMonitor™

Advanced Network Performance Monitoring Software

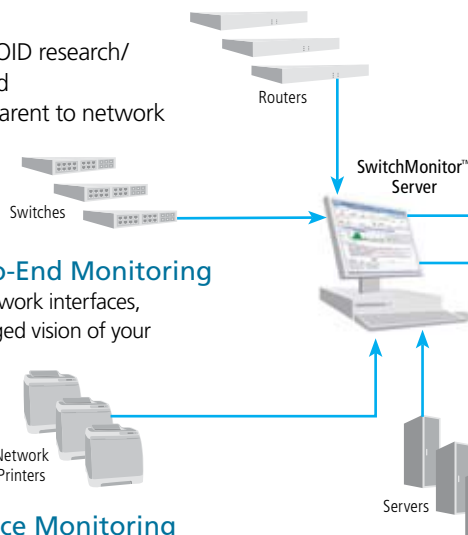

Ensures optimum network performance

- Automatically tracks performance and errors of all network links.
- Sets up in minutes and automatically discovers all network devices and interfaces.
- Tracks current and historical utilization, errors, and broadcasts.
- Wildcard alerting mechanism enables you to rapidly configure alerting.
- Monitor your network hardware regardless of manufacturer.

Rapid Auto-Configuration

Automatically scans the network to find network devices, then examines each device to learn the most efficient method to monitor it. Enables you to easily add or remove individual devices or entire network segments.

- No SNMP MIB or OID research/evaluation required
- Completely transparent to network devices.

Complete End-to-End Monitoring

Tracks errors on all network interfaces, so you get an unabridged vision of your network's health.

WAN Performance Monitoring

Ensures optimum performance on WAN links

Track LAN Performance

Quickly finds duplex mismatches and speed misconfigurations no matter where they exist.

Interface Report

Monitor Current Utilization of Any Link

Shows you what your Internet utilization is right now. No need to set up an analyzer—instantly know current congestion levels.

Real-time utilization of any link

Easily Locate Network Faults

- Over-utilized interfaces.
- Broadcast storms.
- Incorrect interface speed settings.
- Duplex mismatches.
- Packet loss from cabling faults, CRC errors, FCS errors, runts, giants, etc.
